

Caring for the glass panes and profiles

- Use only a damp rag (never dry) to wipe down the panels and frame. You can also use a squeegee to dry the panels.
- Only use gentle cleaners such as a weak vinegar and water solution. Never use cleansing powder or cleaners containing chlorine.
- Do not use microfiber cloths. They destroy any coatings and may cause the glass to become scratched.

Do not use ...

- Scouring or scraping cleaning textiles or sponges.
- Cleaning agents with fluid acids such as hydrochloric or citric acid.
- Scouring agents.
- Cleaning agents containing chlorine bleach lye.
